- Pre-Stained in Four Magnificent Colors Utilizing Proprietary Nanotechnology Coating Process
- Green Renewable, Water-Based Stain
- Two Year Warranty & Made in the U.S.A.

### **Comparing ELITE Doug Fir to Cedar**

Douglas Fir outperforms second growth cedar in both decay resistance and strength. Plus, since the majority of cedar sold in this market is second growth, the most resistant cedar sapwood does not apply (See Doug Fir—Superior Species flyer).

In addition, Douglas Fir is unique among all softwood species in that it is naturally dimensionally stable, with the ability to season well in position. When architects and engineers look for the best in structural lumber, their first choice repeatedly is Douglas Fir. It is universally recognized for its superior strength-to-weight ratio.

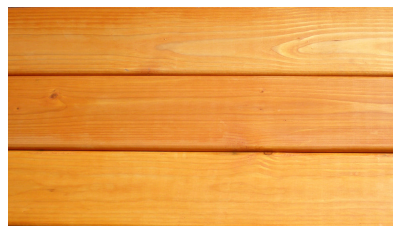

### **The Beauty and Grade of ELITE—DECK**

No wane, skips or splits and live knot — The best Douglas Fir in North America. Bar none.
