The Natural Look of Real Cedar Without the Hassle...

Utilizing state-of-the-art coating technology, Belco Forest Products has combined the look of natural cedar with the durability and low maintenance of fiber cement siding.

The secret is in our proprietary NanoShield™ coating process...

Nano technology provides enhanced color retention and better coating adhesion, far surpassing outdated latex technology.

Our NanoShield™ coating process is specifically engineered for fiber cement siding. We apply two coats of nano-latex coating followed by a baked on curing process. This gives The Woodlands Series™ the beautiful natural look of cedar without the maintenance and durability hassle... Why settle for less when you can have the best of both worlds?

- Next generation coating technology - Nano technology acrylic latex paint
- Two coats - Oven cured
- Enhanced performance over old latex technology - Better color retention and adhesion
- 15-Year Warranty
